

Spring Activated Marking Tool

The Model MC-8 Marking Tool requires only hand pressure to make a clear, legible mark. It features adjustable impact and quick-change marking. With pressure from the palm of the hand, The MC-8 uses spring action to complete the mark. The spring is first compressed until a series of three ball bearings reach an escape groove, at which point the dynamic energy of the spring is released to make the mark. Force of impact is controlled through adjusting the amount of compression in the spring (the greater the compression, the greater the impact).
